

Supplemental Figure 1: MSCs survive following transplant into hypertensive eyes.

Lentiviral transduced MSCs were detected in the retina using an anti-GFP antibody at the end of the experiment (A, D). In addition to being found in/near the retina, MSCs were found in the vitreous of transplanted animals. Legend: GFP – green fluorescent protein; DIC - differential interference contrast; DAPI – 4',6-diamidino-2-phenylindole.
